Sphere Service
Providers retained by
IBM, specializes in
WebSphere, SOA
and Portal
implementations.
Let us assist you with
your J2EE project,
and beyond, to
ensure a smooth
transition to a
proven, secure and
flexible WebSphere
environment.

Upgrade Your Older Versions of WebSphere

to IBM WebSphere 7

In order to ensure that your infrastructure is flexible enough to grow with new business and technical demands it is essential to keep current to the latest version and take advantage of evolving standards and technologies.

When planning a version upgrade to WebSphere 7 from previous releases, it is important to assess and plan for the effort required, as well as understand the necessary skills development for adapting to the new environment. The WebSphere Upgrade Assessment Service will analyze your current environment and deliver a comprehensive plan for successfully and efficiently moving to WebSphere 7 and what additional benefits and features can be leveraged in your infrastructure. Concluding the assessment, a report is delivered that will provide a blueprint for a migration roadmap, encompassing a high-level project plan in conjunction with strategic recommendations.

Whether in an advisory role or conducting the entire migration, Prolifics can provide your organization with a team of highly skilled certified consultants who have deep technical knowledge and proven experience building, implementing and migrating applications to and from IBM products. With this practical experience, Prolifics has built a knowledgebase of the compatibility and functional differences, as well as best practices around migration techniques.

Upgrade Assessment:

Prolifics' Upgrade Assessment walks through the following steps to evaluate your existing application server infrastructure and present you with a plan for moving forward. The final report will be discussed in detail and where necessary, adapted, to the needs and desires of the client.

Application Business and Functional Review

- ◆ Based on customer discussions, understand the business impact of the infrastructure slated for the upgrade to WebSphere 7 including backwards compatibility and new features and benefits that can be leveraged.

Application Architectural Review

- ◆ An Application Architect investigates system topology (hardware, operating system, software), external system interaction, J2EE subsystems utilization, feature utilization and interaction with other third-party systems in order to develop a system topology diagram, an external systems dependencies list and a risk/watch areas list.

Application Source Code Review

- ◆ By examining a sampling of the applications to be upgraded, develop a plan with a risk area assessment and mitigation plan, upgrade work estimate and detailed project plan.
